

[MICAC25] Minutes Week 6 & 7

Giovanni Menon Raphael Toubol Christopher Nyandoro

14th April - 27th April 2025

Abstract

This document provides a summary of the meetings that have taken place during the sixth and seventh week.

Summary

First Meeting

In the first meeting, our aim was to discuss the best way to write the scanner module and to assign the work that remains to each group member. After a short discussion, we agreed on the following:

1. **api.osv.dev** was agreed api to fetch osv's.
2. **Output visualizer** - After coding the osv scanner, the next stage was to find the best way to output the data, and hence development of that feature would start.
3. **GIT**- we also agreed to close one of the feature branch as we continue to work from one branch and the code module and file structure were to be refactored.
4. **research paper & documentation** - we agreed to focus on writing the research paper as well.

Second Meeting

In the second meeting, the decisions of the second meeting were put into action by creating the **Trello** cards for each task that had to be done this week and assigning them to team members. In a bid to further improve the tool, some code refactoring was also suggested, as well as some PR reviews that were to be expected.
