

[MICAC25] Minutes Week 4

Giovanni Menon Raphael Toubol Nyandoro Christopher

31/03 March - 06/04 April 2025

Abstract

This document provides a summary of the two meetings that have been held during the fourth week.

Summary

First Meeting

Our first meeting aimed to define the technology stack and framework that would be used. After a short discussion, we agreed on the following:

1. **golang** as programming languages.
2. **features branch** as repository branching structure. With a major merge with the main every week and a different branch for the document.
3. **overleaf** as tool for writing minutes and the scientific report.
4. **research** as homework for the next meeting.

Second Meeting

The main topic of the second meeting was the future architecture of the CLI (*Command Line Interface*), illustrated in Figure 1. The group also agree on using **Trello** as tool to manage the workload and manage separately the progression of each component.

As last meeting of the week, a debriefing was done regarding the state of the art and material that came out of individual research. Finally, tasks were divided up until the next meeting.
